

# PLATFORM WELL CONDUCTOR ANALYSIS

Available as part of our in-house Riser Analysis service.

## PRODUCT APPLICATIONS

- Improve operating envelopes and reduce rig downtime during drilling
- Provide guidance to ensure you are selecting the right equipment for the job
- Verify that your conductor/riser system is fit for purpose and meets regulatory requirements for the full production life
- Reduce risks offshore by having analysis-driven solutions in place

## PRODUCT BENEFITS

- Provides cost savings through improved equipment selection and reduced rig downtime that far outweighs the price of the analysis
- Finds ways to improve your production life as part of the original conductor design, avoiding expensive remediation work later on
- Understanding what equipment and rig requirements you need means you can make well informed and cost-effective choices
- Provides you with key operational information, such as centraliser loads, to make your well a long-term success
- Reduces risk offshore by having solutions in place, such as knowing your minimum conductor cement returns, minimum pipe thickness etc.

# PLATFORM WELL CONDUCTOR ANALYSIS

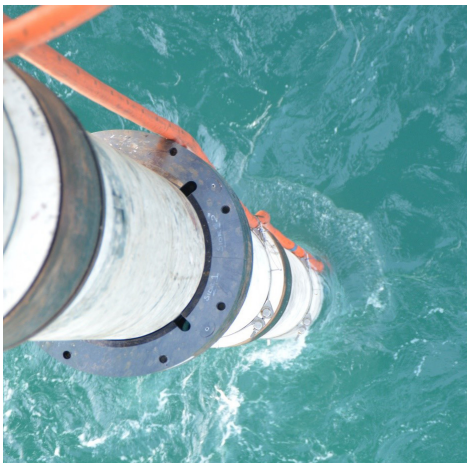

## PRODUCT FEATURES

- Solution driven approach
- Conductor analysis tailored to customer specific needs
- In-house design, project management and offshore teams working closely together to ensure solutions are tailored and suitable
- An extensive peer reviewed report to describe the results and conclusion, which focuses on practical solutions

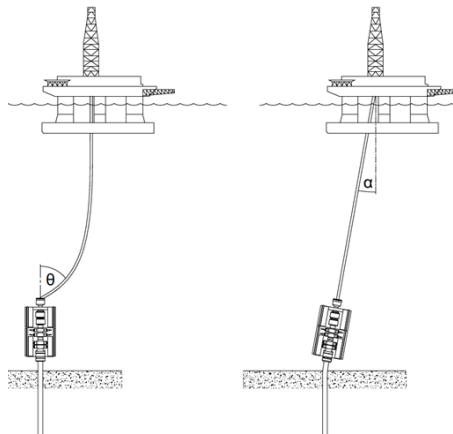

## THE COMPLETE PACKAGE:

- A highly experienced conductor analysis team who have been involved in 100's of conductor analyses and have over 80 years' collective experience
- A proven track record in many different locations around the world
- A commitment to high-quality communication and project management through our managed analysis service
- A dedicated senior analyst for every analysis project we complete, meaning our high-quality standards are always maintained
- Market-leading automation designed specifically for this type of analysis, means we can deliver high-quality analysis at low prices
- Detailed modelling to represent the planned conductor/riser system using market-leading software and analytical methods to reduce conservatism and generate the best possible results
