

# SEMI-SUB/ DRILL SHIP RISER ANALYSIS

Available as part of our in-house Riser Analysis service.

## PRODUCT APPLICATIONS

- Improve operating envelopes to maximise drilling windows
- Provide guidance to ensure you are selecting the right equipment for the job
- Verify that your marine riser and subsea conductor system is fit for purpose and meets regulatory requirements
- Reduce risks offshore by having analysis-driven solutions in place

## PRODUCT BENEFITS

- Provides cost savings through improved equipment selection and reduced rig downtime that far outweighs the cost of the analysis
- Identifies ways to improve your drilling window by optimising space-out and overpull, avoiding expensive downtime during the operation
- Provides you with key operational information, such as optimal overpull, and wellhead fatigue lifetime, to ensure your well is a long-term success
- Reduces risk offshore by having solutions in place, such as knowing your minimum conductor cement returns, minimum conductor wall thickness/ material grade, acceptable connection types, etc.

# SEMI-SUB/ DRILL SHIP RISER ANALYSIS

## PRODUCT FEATURES

- Solution driven approach
- Marine riser analysis tailored to customer specific needs
- In-house design, project management and offshore teams working closely together to ensure solutions are tailored and suitable
- An extensive peer reviewed report to describe the results and conclusion, which focuses on practical solutions

## THE COMPLETE PACKAGE:

- A highly experienced conductor analysis team who have been involved in 100's of conductor analyses and have over 80 years' collective experience
- A proven track record in many different locations around the world
- A commitment to high-quality communication and project management through our managed analysis service
- A dedicated senior analyst for every analysis project we complete, meaning our high-quality standards are always maintained
- Market-leading automation designed specifically for this type of analysis, means we can deliver high-quality analysis at low prices
- Detailed modelling to represent the planned conductor/riser system using market-leading software and analytical methods to reduce conservatism and generate the best possible results
